

NARAYANA RAO GOMPA

AWS DevOps Engineer | Kubernetes | CI/CD | Terraform | Cloud Automation

Results-oriented **AWS DevOps Engineer** with **4.5+ years** of expertise in designing, automating, and owning cloud-native infrastructure and CI/CD pipelines across **Banking and FinTech domains**, delivering high-availability systems on **AWS, Kubernetes, Terraform, and Jenkins** in Agile environments.

+91-8247525235 | gompanarayanarao312@gmail.com | Hyderabad, India

PROFILE SUMMARY

- 4.5+ years** owning end-to-end cloud-native DevOps infrastructure in **Banking and FinTech** domains — architecting, automating, and operating AWS environments serving enterprise-grade, high-availability production workloads for 15+ cross-functional engineers.
- Currently driving **DevOps transformation at TCS Pvt. Ltd.** for a large **Banking sector client (TNGB, Hyderabad)** — sole owner of the full deployment lifecycle for 30+ microservices across multi-node Amazon EKS clusters in an Agile/Scrum delivery model.
- Delivered a **30% reduction in build and deployment durations** by re-engineering Jenkins CI/CD pipelines with Gradle — accelerating release frequency to **20+ deployments per month** and cutting manual intervention across 5 development teams.
- Designed **fault-tolerant, highly available AWS architectures** using EC2, EKS, S3, RDS, VPC, Route 53, ALB, CloudWatch, and IAM — maintaining **99.9% uptime SLA** for mission-critical banking applications with zero unplanned downtime in the last 12 months.
- Built **reusable Terraform and CloudFormation IaC frameworks** — enabling zero-touch multi-environment provisioning (dev, staging, production) and reducing setup time from days to under 2 hours.
- Established **full-stack observability using AWS CloudWatch** — custom dashboards, composite alarms, and SNS runbooks reducing **MTTR from 45 min to under 15 min**; actively contributed to on-call incident response and sprint retrospectives in Agile teams.

CORE COMPETENCIES

AWS Cloud Infrastructure	Kubernetes & Docker	CI/CD Pipeline Automation	Infrastructure as Code
Configuration Management	Monitoring & Logging	Source Code Management	Build & Dependency Mgmt.
Site Reliability Engineering	Alerting & Incident Mgmt.	Container Orchestration	Linux & Shell Scripting

SOFT SKILLS

Ownership & Accountability	Problem Solving & Troubleshooting	Adaptability & Attention to Detail	Cross-Functional Team Collaboration
----------------------------	-----------------------------------	------------------------------------	-------------------------------------

WORK EXPERIENCE

Nov 2022 - Present | AWS DevOps Engineer | TCS Pvt. Ltd., Hyderabad

Client: **TNGB (Banking Sector), Hyderabad** | Agile / Scrum

- Owned and managed a multi-node Amazon EKS cluster** running 30+ microservices in production — responsible for node group autoscaling, cluster version upgrades, pod scheduling, resource quotas, and zero-downtime rolling deployments end-to-end.
- Architected and owned end-to-end Jenkins CI/CD pipelines** for 10+ Java applications using Gradle — enforced pipeline-as-code via Jenkinsfile, parallel stages, artifact caching, SonarQube quality gates, and Nexus artifact repository integration; achieving **30% faster release cycles and 20+ deployments per month**.
- Led full containerisation of the microservices stack** — authored optimised multi-stage Dockerfiles, enforced image tagging strategies, integrated **Trivy** container vulnerability scanning into the CI pipeline, and standardised container security practices across 5 squads.
- Designed modular Terraform IaC frameworks from scratch** — provisioned VPC, public/private subnets, EC2, EKS node groups, RDS, and S3 using environment-specific workspaces across dev, staging, and production; reduced provisioning time from days to under 2 hours.
- Built and owned Terraform remote state management** using S3 backend with DynamoDB state locking — eliminated concurrent state corruption risks, enabling safe parallel infrastructure changes across a team of 8+ engineers.
- Implemented GitOps continuous delivery using ArgoCD and Helm** — authored and maintained Helm charts for 15+ microservices, automated Kubernetes manifest synchronisation from Git, enabling declarative CD, drift detection, and a full audit trail for every production deployment.
- Engineered secure domain routing** by integrating Route 53, Application Load Balancers, AWS Certificate Manager (ACM) for SSL/TLS termination, and Kubernetes Ingress controllers — enabling HTTPS-enforced, path-based and host-based routing across 15+ services.
- Configured Horizontal Pod Autoscaler (HPA) and Cluster Autoscaler** for dynamic workload scaling on EKS — defined CPU/memory thresholds and scaling policies ensuring zero pod evictions during peak traffic events across 30+ microservices.
- Owned Git branching governance and release management** across 3 Agile teams — implemented GitFlow with protected branches, mandatory PR review gates, and release tagging standards; achieved zero hotfix deployments in the last 6 sprint cycles.

- **Resolved critical AWS VPC peering outage** impacting 4 development teams — root-caused misconfigured route tables, restored full connectivity within SLA window and received formal client commendation.
- **Delivered Kubernetes enablement workshops** to 10+ engineers covering Pods, Deployments, Services, Ingress, HPA, and RBAC — accelerated team onboarding to container-native workflows by 3 weeks.

Jan 2022 - Nov 2022 | DevOps Engineer | Clairvoyant Pvt. Ltd., Pune

Client: PayPal, Pune | Agile / Scrum

- **Owned and operated AWS infrastructure** — 100+ EC2 instances, ELB, VPC, S3, IAM, Auto Scaling, CloudWatch, and SNS — maintaining 99.9% uptime and security compliance for PayPal's internal platforms serving 4 engineering teams.
- **Delivered CI/CD automation for ECS-based microservices** — built Jenkins pipelines with code checkout, unit testing, SonarQube analysis, Docker build, ECR push, and Blue/Green deployment to Amazon ECS with traffic shifting via ALB target groups.
- **Managed Docker containerisation and artifact pipelines** — authored multi-stage Dockerfiles, pushed versioned images to Amazon ECR, managed Nexus artifact repository for build dependencies, and orchestrated deployments across Amazon ECS clusters.
- **Provisioned and operated EKS clusters using Terraform** — authored Kubernetes manifests (Deployments, StatefulSets, DaemonSets), configured PersistentVolumes, PVCs, ConfigMaps, Secrets, and namespace-level RBAC policies.
- **Implemented Ansible configuration management** — authored reusable playbooks and roles for OS configuration, package management, and environment setup across 50+ EC2 instances, eliminating manual configuration drift entirely.
- **Managed IAM security posture** — designed fine-grained roles, policies, and EC2 instance profiles following least-privilege; enforced MFA, scheduled access key rotation, and periodic access reviews across all accounts.
- **Configured CloudWatch alarms, event rules, and SNS notifications** for 20+ services — built automated alerting runbooks with Slack webhook integration for real-time incident notifications; cut P1 response time from 30 minutes to under 10 minutes.
- **Drove AWS cost optimisation** — right-sized EC2 instances using CloudWatch and AWS Cost Explorer metrics, configured Auto Scaling lifecycle hooks, and scheduled non-production shutdowns via Lambda; reduced monthly AWS spend by approximately 20%.
- **Designed backup and DR strategy** — configured automated EBS snapshots, S3 cross-region replication, and RDS automated backups aligned to defined RPO/RTO targets for all critical workloads.
- **Built infrastructure automation framework using Bash and Python (boto3)** — automated disk-usage monitoring, log rotation, AMI cleanup, and system-health checks across all environments; eliminated 10+ hours of weekly manual operational tasks.

Key Achievements:

- **Scaled CI/CD to 20+ deployments per month** (TCS/TNGB) — pipeline-as-code with Jenkinsfile, Gradle caching, parallel stages, SonarQube, and Nexus integration across 10+ Java applications with zero failed deployments in last 6 sprint cycles.
- **Zero production rollbacks** across 12 consecutive releases after Terraform IaC adoption — eliminated manual provisioning errors and environment drift, achieving fully consistent and repeatable deployments.
- **MTTR reduced from 45 min to under 15 min** — centralised CloudWatch observability with composite alarms and automated SNS runbooks enabled immediate P1 detection and structured incident response.
- **~20% monthly AWS cost reduction** (Clairvoyant/PayPal) — EC2 right-sizing via Cost Explorer, Auto Scaling optimisation, and non-prod scheduling delivered measurable savings reported directly to the client.
- **Formal client commendation (TCS/TNGB)** — resolved critical VPC peering outage impacting 4 teams within committed SLA window through systematic root-cause analysis and immediate remediation.

TECHNICAL SKILLS

Cloud (Core): EC2, S3, RDS, VPC, Route 53, ALB, IAM, DynamoDB, Auto Scaling, SQS, SNS, Lambda

Cloud (DevOps): EKS, ECS, ECR, CloudWatch, CloudFormation, AWS Config, KMS, ACM, Cost Explorer

Containers: Kubernetes (EKS, Helm, Ingress, HPA, Cluster Autoscaler, DaemonSet, PVC, RBAC), Docker

CI/CD & GitOps: Jenkins (Jenkinsfile, parallel stages), ArgoCD (GitOps), GitHub Actions, SonarQube, Trivy

IaC: Terraform (modules, remote state, S3 + DynamoDB locking), AWS CloudFormation

Config Mgmt.: Ansible (playbooks, roles, dynamic inventory, idempotent automation)

Artifact Mgmt.: Nexus Repository, Amazon ECR, Docker Hub

Monitoring & SRE: CloudWatch (dashboards, alarms, Logs Insights), Prometheus, Grafana, SNS, SLI/SLO/SLA

Security: IAM (least-privilege, roles), Security Groups, NACLs, KMS, ACM, AWS Config, Trivy

Scripting: Bash (automation, cron, monitoring), Python (boto3, automation scripting)

Build Tools: Maven, Gradle (caching, multi-module builds, parallel execution)

Version Control: Git, GitHub, GitLab (GitFlow, protected branches, PR workflows, tagging)

OS / Networking: Linux (Ubuntu, Amazon Linux 2), TCP/IP, DNS, HTTP/S, VPC peering, NAT Gateway

Methodology: Agile, Scrum, Sprint Planning, Retrospectives, JIRA

EDUCATION

- **B.Tech.** — Jawaharlal Nehru Technological University | 2019
